NEW WATER PUMP CATALOGUE 2006/7 AVAILABLE NOW

GMB updated our product range of WATER PUMPS and issued new catalogue, version 2006/7 at the end of August.

In this new catalogue, we added 113 types of water pumps to our expanded range.

In particular, to satisfy the recent market demand for Korean applications and enhance customers' satisfaction, we added a lot of types of pumps for Korean application.

Also, we reviewed part numbers for those applications and indicated pictures available items at present, which will enable you to identify the products more easily.

As our further service, we introduced "The function and mechanism of water pump" and "Structure and batch traceability of GMB water pump" (see Fig. ① and ②) on the first two pages of new catalogue hoping to extend your understanding and interest of our water pumps.

On the third and fourth pages, we have introduced specimen problems of leakage, noise and overheating with their causes and preventions (see Fig. ③ and ④)

We sincerely hope that the advice given in these specimen conditions will enable you to communicate more closely with your customer and help to avoid the inconvenience and cost caused by mis-installation and/or mis-use
