

GMB CORPORATION JAPAN WAS AWARDED ISO/TS 16949: 2002 ON JULY 2, 2008

On July 2, 2008 GMB Corporation Japan was certified ISO/TS 16949: 2002, which is an international quality management system for the design, development and manufacture of water pump assemblies, universal joints, steering joint kits and needle roller bearings.

This certification for GMB Corporation Japan now means that all of our own production plants, located in Japan, Thailand, Korea and China, have been awarded ISO/ TS 16949: 2002.

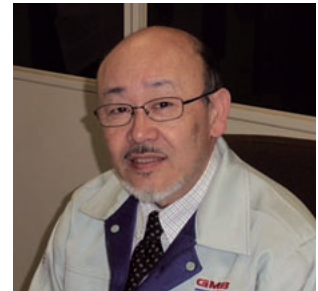

With this quality management system all staff in the GMB group will be even better prepared to offer improved services, products and procedures to maximise your satisfaction.

GMB celebrated its 65th anniversary in 2008, and despite the worldwide economic downturn performed admirably due to the support of its enthusiastic customers. Please accept our heartfelt gratitude.

Although our automotive industry is undergoing drastic changes marked by increases in costs, decreases in demand and sudden currency fluctuations, 2009 will see us developing with you a strong and flexible corporate structure to overcome this unprecedented global recession, in the spirit of our slogan;

"Your success is our future"

We wish you all an excellent and prosperous New Year.

Akira Mizutani, Vice President GMB Corporation, Japan

A happy new year, colleagues and friends.

Another year of challenge is starting. This one looks to be the most challenging in our history. For you too maybe? Major city Stock Market charts tell the story. Open up any news paper every morning and you cannot miss the news columns crying out about failing automotive celebrities. There are grim forecasts for all economies for the coming years. And most grievous of all, the Yen is revaluing against all other currencies.

GMB is preparing for the worst case as you surely will be too. But in doing so we do not compromise our commitment as the market leader. The original GMB products shall always be around the market.

GMB wants to support and listen to you, our loyal customers. Please contact your nearest GMB representative to discuss market initiatives to tackle this global problem.

Shuji Kuwamura, GM, Sales Dept. GMB Corporation, Japan
